

ABSTRACT OF THE DISCLOSURE

A remote start control apparatus, which is installed in a vehicle equipped with an immobilizer unit, which obtains a code output when an ignition key is inserted into a key cylinder and permits the starting of an engine when it is determined that the code is a unique vehicle code, and which controls engine start functions upon receiving an instruction from a portable transmitter, includes: an EEPROM for storing a unique vehicle code; a unit for, upon receiving an engine start instruction signal from the portable transmitter, transmitting the code in the EEPROM to the immobilizer; and a unit for, upon receiving a theft occurrence signal from a security unit, deleting the code stored in the EEPROM.
